EDUCATION

University of California, Los Angeles (UCLA)

Expected Graduation - December 2027

B.S. Computer Science

Los Angeles, CA

- Relevant coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Computer Architecture, Object-Oriented Programming
- Activities: 2× Hackathon Winner (BruinAI Hackathon, LA Hacks), Software Team Lead at OC Robotics, CS Tutor

EXPERIENCE

MLH Production Engineering Fellow (Meta)

June 2026 – Aug 2026

Production Engineering Fellow

Remote

- Selected for the highly competitive Meta × MLH Production Engineering Fellowship, completing 12 weeks of structured Production Engineering curriculum and mentorship from Meta engineers.
- Investigated Linux system behavior under CPU saturation, memory pressure, and resource contention using vmstat, sar, journalctl, and /proc while troubleshooting CentOS environments.
- Built and deployed a containerized Flask application with MySQL, NGINX, and Docker, automating testing and deployment with CI/CD through GitHub Actions and configuring Prometheus and Grafana for monitoring and observability.

Boundary RSS

Mar 2025 – May 2025

Software Engineer Intern

Remote

- Engineered a Python DEM extractor integrating the OpenTopography API, automating elevation retrieval and reducing manual analysis time by 70% across 10+ geospatial research workflows.
- Built and deployed an AWS EC2 ETL pipeline for large geospatial datasets, using parallel processing and concurrent object-storage uploads to reduce validation time by 40%.
- Developed unit and integration tests for core pipeline modules, catching geospatial edge cases before deployment and reducing post-release defects by 25%.

CodeDay Labs

Dec 2024 – Feb 2025

Open Source Contributor | [Pull Request #1426](#)

Remote

- Fixed a production unit-conversion bug in Open Energy Dashboard that caused inaccurate kWh-to-kg CO₂ calculations for 200+ organizations tracking sustainability metrics.
- Built a Mocha.js and Chai test suite for chained conversions and 15+ edge cases, achieving a 100% pass rate across previously failing cases.
- Merged Pull Request #1426 after iterating on maintainer code-review feedback and satisfying automated CI/CD checks.

PROJECTS

Autonomous Vehicle Telemetry Platform

MLH PE

- Built a telemetry pipeline using Go, Python, Redis Streams, PostgreSQL, and MinIO to replay KITTI GPS/IMU data and persist structured and raw payloads.
- Engineered a bounded TCP connection pool and Redis RESP encoder from scratch, sustaining 55K events/sec at sub-2 ms p99 latency and 7× higher throughput than per-event dialing.
- Deployed with Docker Compose and Kubernetes, added Prometheus/Grafana monitoring, and validated worker-crash recovery using Redis consumer groups and acknowledgment-based replay.

Talantis

LA Hacks Winner

- Built a talent-intelligence platform with Next.js, FastAPI, PostgreSQL, and Supabase, aggregating internship outcomes across 63 companies, 31 universities, and 64K+ placements.
- Engineered six PostgreSQL-backed agent tools with Server-Sent Events, delivering sub-second streamed Claude responses through a FastAPI backend.

ClubApply.ai

BruinAI x AWS Hackathon Winner

- Built an AI club-application platform with React, FastAPI, and AWS Bedrock, coordinating six specialized research and coaching stages to synthesize club sources and applicant resumes into tailored application guidance, resume edits, and interview preparation.
- Engineered an asynchronous pipeline with concurrent research and coaching tasks, shared Pydantic models, and automatic failover across three LLM providers; deployed the containerized API on AWS Lambda through Amazon ECR and the frontend on Vercel.

Chad the Interviewer

SB Hacks XII

- Built a real-time interview platform with React, Node.js, WebSockets, MongoDB, and Deepgram, streaming live transcripts to an adaptive question-generation backend.
- Designed an asynchronous MongoDB evaluation pipeline that processes interview transcripts and generates structured feedback on clarity, technical depth, and response quality.

TECHNICAL SKILLS

Languages: Python, Go, Java, C++, JavaScript, TypeScript, SQL, Bash

Backend/Frameworks: FastAPI, Flask, Node.js, Express, Django, React, Next.js

Databases/Messaging: PostgreSQL, Redis, MongoDB, MySQL, SQLite, Supabase

Infrastructure/DevOps: Linux, AWS, Docker, Docker Compose, Kubernetes, NGINX, GitHub Actions, MinIO, Vercel, Render

Developer Tools: Git, Postman, Prometheus, Grafana
